

Introduction

Where does a robot's energy come from?

In this 3-week workshop, young children (4-7) discover where energy comes from, how tablets and robots use electricity, and how AI can help us build a greener planet.

Key Goals

- **Learn:** Where energy comes from.
- **Notice:** How technology uses electricity.
- **Imagine:** Robots helping nature.
- **Create:** An eco-city together.

Resources

- **Stories:** Energy and environment picture books.
- **Game:** Energy Collector cards and stickers.
- **Build:** Lego, paper, crayons, or Minecraft.
- **Tech:** Tablets or laptops when available.

Environment & AI

Energy, Nature & Eco-Cities

**Co-funded by
the European Union**

Target Group: 4-7 y.o.
SmAile Project

Learning Outcomes

Knowledge:

- Energy comes from natural resources.
- Robots and tablets need energy.

Skills:

- Counting energy points.
- Building and sharing ideas.

Values

- Care for nature.
- Responsible daily habits.

1. Energy Collector Game

Learning Through Play: Children pick illustrated task cards, collect energy stickers, and compare which activities use more electricity.

2. Helping the Planet

Eco-City Challenge: Groups draw or build a city with green spaces, solar panels, and robot helpers.

3. Reflection

Closing Circle: Children share what surprised them and one thing they can do at home to save energy.

Discussion: “How can robots help take care of our planet?”
