

Introduction

How does AI learn?

In this workshop, students (8-12) explore how AI “thinks” and learns, discover different AI types like Computer Vision and chatbots, and design their own ideas for solving real-world problems.

Key Goals

- **Understand:** How AI learns.
- **Identify:** Different AI types.
- **Compare:** Human and AI answers.
- **Design:** An AI solution idea.

Resources

- **Video:** Introductory AI examples.
- **Game:** AI matching cards and impostor challenge.
- **Tech:** Laptops/tablets and projector.
- **Support:** Worksheet, checklist, timer, and reflection form.

How AI Learns

AI Types & Problem Solving

**Co-funded by
the European Union**

Co-funded by the European Union.

Target Group: 8-12 y.o.
SmAllie Project

Learning Outcomes

Knowledge:

- Basic AI learning ideas.
- Types such as chatbots and Computer Vision.

Skills:

- Comparing human and AI answers.
- Designing an AI idea in teams.

Values

- Curiosity.
- Critical thinking.
- Responsible AI use.

1. AI in Our Lives

Video and Quiz: Students discuss where they meet AI, watch a short intro video, and test prior knowledge with a quick quiz.

2. The AI Impostor

Game and Research: Students compare human and AI-generated answers and research different AI paradigms and industries.

3. Design Challenge

Solve a Problem: Teams choose a real problem, match it to a type of AI, and present a safe, fair solution idea.

Discussion: “How can we use AI in a fair and safe way?”
